

Are Covid-19 vaccines safe?

What are the world's best experts saying?

Do you really believe that every one of these highly qualified experts, each with many years' experience in their respective fields, is a 'conspiracy theorist' spreading 'misinformation'?

Dr Tess Lawrie (MBBCh, PhD) - Director, Evidence-based Medicine Consultancy Ltd

'It is now apparent that these products in the bloodstream are toxic to humans. An immediate halt to the vaccination programme is required whilst a full and independent safety analysis is undertaken to investigate the full extent of the harms, which the UK Yellow Card data suggest include thromboembolism, multisystem inflammatory disease, immune suppression, autoimmunity and anaphylaxis, as well as Antibody Dependent Enhancement (ADE)... 'The MHRA now has more than enough evidence... to declare the COVID-19 vaccines unsafe for use in humans.'

Dr Michael Yeadon - former head of respiratory research at Pfizer

'certain batches of vaccines are extremely toxic.. it's not the same stuff in each vial and that means criminal acts are being committed.. The vaccines do not prevent you catching it... they don't prevent transmission.. but they are unfortunately very harmful. They are certainly toxic... You must not vaccinate your children'

Dr Sucharit Bhakdi - former Professor and Head of the Institute for Medical Microbiology and Hygiene, with expertise in vaccinations

'The pandemic is a fake... based on a PCR test that was dangerously inaccurate giving false positive data...' 'They are killing people with this vaccination... For God's sake inform yourself before you let yourself and your beloved ones be vaccinated... don't get a 3rd, 4th or 5th because you are going to contribute to the decimation of the world's population.' > Search the [HealthImpactNews](https://HealthImpactNews.com) channel on rumble.com for 'They are Killing People with COVID Vaccines'

Dr Robert Malone - Scientist and Physician; inventor of mRNA & DNA vaccines

'They are not working to prevent infection, replication, and spread to others, and they are not completely safe. ... The full nature of the risks remains unknown. In contrast, the natural immunity which healthy immune systems develop after infection and recovery from COVID-19 is long lasting, broad, and highly protective from disease and death caused by this virus.'
