

# PLEASE PROTECT YOUR CHILDREN

On 19 March 2020, the UK Govt downgraded Covid-19 from being classified as a 'high-consequence infectious disease' (HCID). It therefore should have been treated more like a seasonal flu or common cold. The Covid-19 "virus" has yet to be isolated.

The so called "Covid 19 vaccines" have only been given Emergency Use Authorisation (EUA), and are still at Stage 3 Clinical Trials until 2023.

The child vaccine is in children's clinical trials until 2026 and obviously, there is no long-term data on adverse reactions.

The initial Pfizer vaccine data lists approximately 1200 potential adverse reactions.

Since the jabs started, the 12 month death rate has increased by 42% in some countries. with an average 300% increase in other health issues.

In the UK, there has been a significant rise in teenage boys deaths that correlates with the Pfizer vaccine roll-out.

Between 24 Jan to 20 Feb 2022, the jabbed accounted for nearly 90% of all Covid-19 deaths in England. Even if 90% of the population were jabbed (it is more like 64 - 73 %), why get a jab with the huge risk of adverse reactions?

If you allow your child to get jabbed and he/she then has an adverse reaction, please report it to:

Your local police station and get an incident report for future use

The UK's MHRA Yellow Card reporting system [www.yellowcard.mhra.gov.uk](http://www.yellowcard.mhra.gov.uk)

Vaccine Damage claims/payout. If you or someone you know has been damaged by the jab, or someone you know has died as a result of the jab, you can contact the Vaccine Damage Payments Team to ask for a claim form:
